

How to Connect Your Trading Advisor

EA Guard protected expert advisor for MetaTrader 5 - 5 quick steps.

1 Get the protected advisor file

Ask the author for the protected file (e.g. MyEA_protected.mq5) or download it from the EA Guard panel at <https://eamt5.dev>.

2 Install and compile in MetaEditor

Copy the file to MQL5\Experts (in MT5: File > Open Data Folder).
Open it in MetaEditor and press F7 (Compile) - it must show 0 errors.

3 Allow WebRequest for both license URLs

In MT5 open Tools > Options > Expert Advisors and enable "Allow WebRequest for listed URL". Add both addresses:

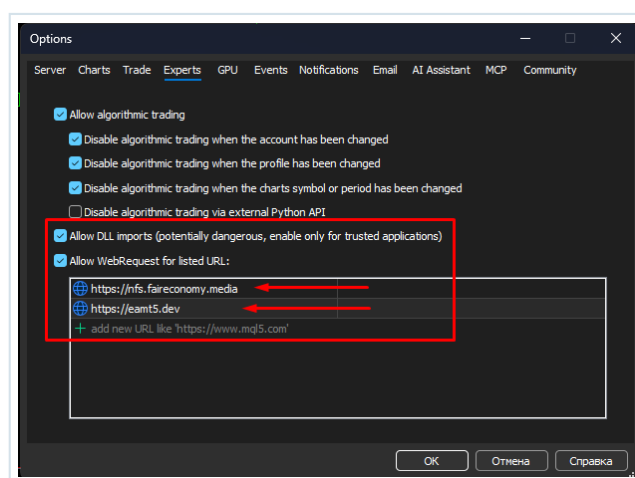

<https://eamt5.dev>

<https://nfs.faireconomy.media>

Without these two URLs the advisor cannot verify its license.

4 Also enable DLL imports (for indicator-based protection)

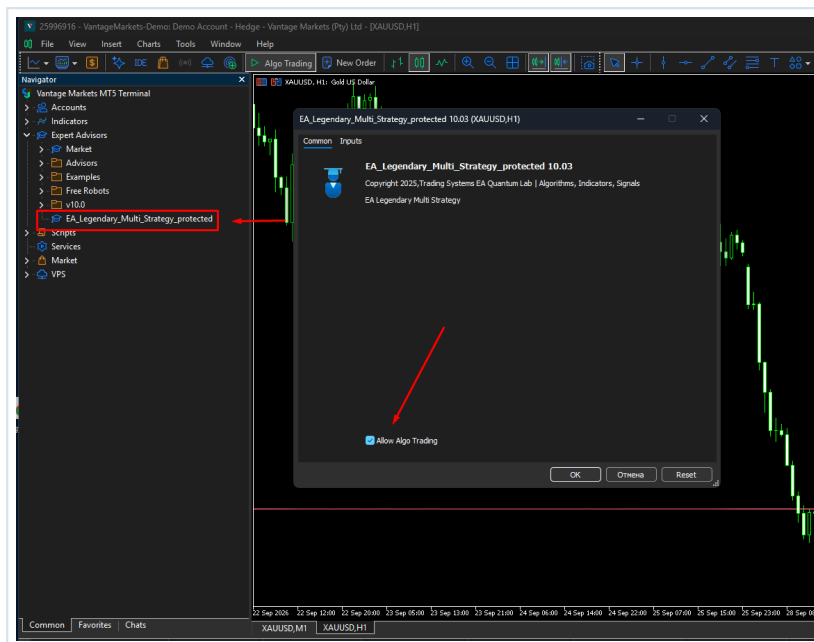

In the same Options window check 'Allow DLL imports (potentially dangerous, enable only for trusted applications)'.

5 Attach the advisor to a chart

Drag the compiled advisor from Navigator > Expert Advisors onto a chart, tick 'Allow Algo Trading' in the dialog and press OK.

Step 5 (continued) - the advisor dialog before launch

Activation

1 Enter your gift code (if you received one)

Open the advisor inputs (double-click the advisor name in the chart's 'Experts' list, or F7 on the chart) and paste your code into the field `lnpGiftCode`. The code is valid until its expiry date.

2 Account activation (no code needed)

If the author activated your account number in advance, just run the advisor - it starts automatically on that account only, until the expiry date set by the author.

3 Check that it works

Open the 'Experts' tab at the bottom of the terminal. On startup the advisor reports its license status. If you see an activation error, re-check the two `WebRequest` URLs from step 3 on page 1.

Important

- The advisor runs only on the account it was activated for, and only until the expiry date.
- Do not rename the protected file after compilation - the license check depends on it.
- If MT5 shows error 4014, the `WebRequest` URLs are missing - redo step 3 on page 1.
- Need a new file or a new code? Contact the author or log in at <https://eamt5.dev>.
